Dr. J. Lederberg

Dear Josh,

I believe that you should be back in Stanford at about this time. If not, this can wait for reply until you do return. I hope you have had a pleasant and rewarding trip.

Although the question of the size of my immediate lab is still a partial mystery to me, I have made a working sketch of a layout which is somewhat adjustable according to the actual space available. Will this be adequate for an architect to make a final plan including specs for the lab furniture? I have no idea, for example, of the widths and heights of standard cabinets and fixtures. This information will presumably be available, though, to the architect. *enclosed*

I have made no provision for a hood in the lab assuming that a hood will be included in the prep room adross the hall. I am counting on xplace there for a deep freeze and dry-ice chest, as well.

I received an envelope containing ~~several~~ copies of several letters pertaining to the equipping of the Pediatrics and Genetics depts. They were addressed, peculiarly enough, to you, c/o me here at the NIH. Do you want them back or were they meant for me?

By when do you want a detailed list of equipment wants?

Regards to Esther.

Yours,

Len
